(deep breath-tief Luft holen, by burrowing-wühlen, mud-Schlamm)

Platypus eat some worms, crabs ore insects. They search for food underwater. For this, they take a deep breath and dive under, this way they can stay around two minutes under water. They find their food in the water swimming or by burrowing with they beak in the mud or turn stones so.

What they eat?

The platypus close they eyes and ears when it dives under.

a platypus which dive under to search for food
