

minutes you will die. Its venom is called Robustoxin (δ -Atracotoxin-Ar1).

And how can you identify a funnel web spider: you can identify it by its shiny carapace, deeply curved groove. But it doesn't have an obvious body pattern.

Its eyes are closely to the ground.

Four spinnerets, largest with segment longer than

-6-

wide.

Lower lip (labium) studded with short, blunt spines.

There are 38 different described species of funnel web spiders.

Besides *Atrax robustus* several other species have been sporadically involved in life threatening envenomations. They include the Newcastle Funnel-web Spider (*Atrax*

-7-

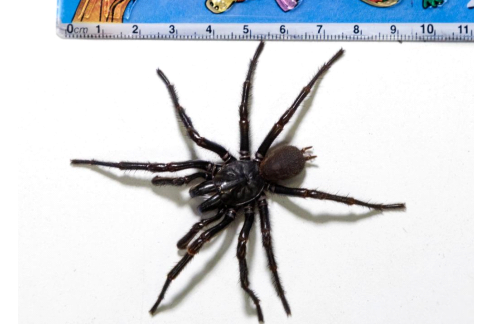

christenseni), Blue Mountains Funnel-web Spider (*Hadronyche versuta*) and the Southern and Northern Tree Funnel-web Spiders.

You might think that the deadliest spider has a strong bite force, in comparison to other spiders it's very powerful.

Australians deadliest spider

Written by Philipp Rogge

-2-

Australia has a wide spread of spider species, some dangerous some have beautiful color and others are small and then others are big and deadly the big and deadly ones are the ones we are interested in this Minibook.

Australia has 10.000 different spider species but only 3600 are described. Out of 10.000 spiders only a

-3-

handful are dangerous for us humans. A huge percentage are so small to even pierce our skin.

And the most dangerous spider is the Sydney Funnel web spider. And why you might ask. Well it's pretty easy, I think you know why, and if you don't the is capable of killing with its poison in under 15 minutes.

But how does its poison work?

-4-

It affects the Nervous system of Humans and Monkeys but not other Mammals. And after the bite there is a very bad pain at the bite site. And after the bite you will begin to heavily sweat you will get nausea you will begin to vomit and you will get abdominal pain.

Plus it's the most Venomous spider in the world. It also is one the most aggressive and deadliest creatures in the world.

-5-

I have not talked about the features of the spider. It can grow up to 5cm in length. The biggest of its kind a spider nicknamed Big Boy measuring up to 9.2cm.

And now to its most terrifying feature its fangs.

The Fangs are razor sharp and can easily pierce through your skin and even some shows and if these fangs bite you it's not only gonna hurt but also if you don't get an antivenom in under 15
